

## Street Service Vehicle SDF

The 'SDF' has the operating field for cleaning and maintenance of special city areas like parking places, bus stops, parks etc. and for the clearing of snow in winter.

The aluminium structure, constructed using the lightweight mode of construction, can be mounted on every type of single or double cabin vehicles.

At the rear is mounted a large dirt and collection hopper with openings on both sides. A metal cage is fitted on the roof of the hopper for storage of hand tools like brushes, rakes and leaf vacuum.

The hopper is emptied towards the rear using an electrical hydraulic system that is driven over the vehicle battery.

A quickly exchangeable module for summer or winter operation fitted with lockable roller blinds, is mounted between the hopper and the double cabin.

The working team for the 'SDF' normally consists of 4 persons. Due to high mobility and flexibility of the 'SDF' these 4 persons cover an area that normally requires that 6 – 7 persons are used.

The working team is normally in direct contact with the control centre and can quickly react to any urgent required assignments like after accidents etc.

Because the 'SDF' is to 100 % produced in our factory in Hallein, it is possible that individual wishes of the customer can be easily integrated.

### TECHNICAL DATA

#### Standard Configuration / Sommer Operation

- Aluminium Hopper
- Hose reel with spring return automatic, inc. 20 m hose, hand spraying pistol with steel pipe and flat spray nozzle.
- High pressure water pump 140 bar
- Tool cage 520/270/240mm
- 2 Plastic water tanks each 200 L

#### Dimensions and Weight

- L x W x H: 1700x1450x2800 mm
- Weight: approx. 600 kg

#### Options:

- Winter operation unit  
Module for acceptance of a snow blower, inc. 2 holders for spreading material.
