

Front-Sprinkler-Unit TGA

The TGA sprinkler-system has been designed for watering trees, plant tubs and lawn areas along streets or similar watering works.

Basic Description:

The TGA sprinkler-unit can be mounted on any DIN front mounting plates.

All swivel- and control-functions are done by hydraulic-cylinders and are adapted to each front-exchange-system.

Various water-pump systems are available as options and will be mounted as needed.

Depending on the chassis size various tank-types and accessories like different hose-reels are available.

TECHNICAL DATA

General:

- swivel joint 200° from left to right and back
- main-arm swivel angle: vertical 75°
- side-arm swivel angle: 155°
- total offset range: 4.000mm

Weights & Measures:

- approx. 250 kg
- L x W x H: 1700 x 1450 x 2800 mm

Options:

- hydraulic control
- proportional control
- dry-safe piston-diaphragm-pump 100l/20bar for hydraulic or PTO drive
- selfsucking waterpump for filling out of open waters (400l/8bar)
- adjustable sprinkler-head
- demounting devices
